Driven by Knowledge Powered by Technology

THE COMPLIANCE INTELLIGENCE PLATFORM

COMPLIANCE-LLM

In-house virtual compliance expert

We don't sell a compliance tool. We deliver a compliance expert, one that is available all year, answers in plain language, and is tailored to your organisation: your structure, your contracts, your regulators, your obligations. Each deployment is configured to the entity it serves, never a generic control library. Built on fifteen years of audit practice and four years of in-house engineering.

AND NOTHING KNOWS YOU
No product applies your structure, contracts and history across every obligation. Only a senior human ever has.

CONTRACTUAL
MSA security schedules · DPAs, SLAs, audit rights · TISAX, HITRUST

GEO-BASED
UAE: DESC ISR, ADHICS, CBUAE · US: FedRAMP · India: DPDP, CERT-In

CERTIFICATION
ISO 27001, 27701, 9001, 14001, 45001, 42001, 22301 · SOC 2 · PCI DSS

REGULATORY
GDPR, DPDP, PDPL · HIPAA · SOX · EU AI Act, NIS2, DORA · AML/CFT

CYBER SECURITY
NIST CSF and 800-53 · CIS Controls · ISO 27002 · FedRAMP · VAPT, monitoring, IR

ONE PLATFORM, WITH THE TOOLING INSIDE IT

Advisory
Interpretation, applicability, gap analysis

Internal Audits
Planning to findings to CAPA

Plain-Language Answers
As interactive as a human expert

Document Creation
Drafted to the standard, not stored blank

Knowledge Repository
Frameworks, regulations, interpretations

Sovereign Deployment
On-premises or dedicated cloud

Trigger-Based Compliance
Fires on date, event or change

Document Repository
Policies, evidence, records, versioning

SaaS Subscription
Low commitment, fast onboarding

Cyber Security Routines
Monitoring, scanning, evidence capture

Unified Dashboard
One view across every obligation

Content Packs, Not Rebuilds
New standard or jurisdiction, same engine

15+	4	1
YEARS OF COMPLIANCE PRACTICE	YEARS OF IN-HOUSE ENGINEERING	FIXED COST, NOT THREE PURCHASES

PRB CONSULTING

In-house virtual compliance expert

Today's compliance stack is three purchases deep (a GRC licence, a consultant and an internal team) and still leaves a gap between the layers.

Advisory

Interpretation, applicability and gap analysis, delivered interactively: ask in plain language and get an answer grounded in your organisation rather than a generic control library.

Traditionally bought from: a senior consultant

Document Creation

Policies, procedures, manuals and records drafted to the standard. Documents are authored, not just stored, so every entity is not left writing its own in its own format.

Traditionally bought from: a consultant, per document

Trigger-Based Compliance

Obligations fire on a date, an event or a regulatory change, with an owner and a task assigned at the moment they fire.

Traditionally bought from: a calendar and someone's memory

Cyber Security Routines

Control monitoring, scanning and evidence capture running inside the same platform as the obligations they evidence.

Traditionally bought from: a GRC tool licence

Internal Audits

Planning, execution, findings and CAPA tracking end to end, against the frameworks already loaded in the platform

Traditionally bought from: an internal team, in spreadsheets

Knowledge & Document Repository

Frameworks, regulations and their interpretations held alongside your policies, evidence, records and version history, in one place, searchable.

Traditionally bought from: the consultant's head

Unified Dashboard

A single view across certification, regulatory, cyber security, geo based and contractual obligations: the view no layer of the current stack produces.

Traditionally bought from: nothing

Two Delivery Models

Sovereign: dedicated cloud or on-premises for regulated entities, government and critical infrastructure; compliance data never leaves your boundary. SaaS: monthly subscription, low commitment, fast onboarding.

Traditionally bought from: one platform, two boundaries

WHY IT SCALES

The reasoning layer sits separate from the content layer, so a new jurisdiction or standard is a content pack, not a product rebuild: sector and jurisdiction are configuration, never a fork. Regimes ship as packs: EU (GDPR, NIS2, DORA, AI Act) · India (DPDP, RBI, SEBI) · KSA (SAMA CSF, NCA ECC, PDPL). New standards such as ISO 42001, ISO 27701, TISAX and HITRUST load the same way, as can a customer's own bespoke supplier requirements, sitting alongside ISO.

ONE ENGINE, EVERY OBLIGATION

CERTIFICATION

ISO 27001 · 27701 · 9001 · 14001 · 45001 · 42001 · 22301 · SOC 2 · PCI DSS

REGULATORY & GEO-BASED

GDPR · DPDP · PDPL · HIPAA · SOX · EU AI Act · NIS2 · DORA · CBUAE · DESC ISR · ADHICS · CERT-In

CYBER & CONTRACTUAL

NIST CSF · NIST 800-53 · 800-171 · CIS Controls · ISO 27002 · FedRAMP · TISAX · HITRUST

Serving BFSI, healthcare, manufacturing, aviation and logistics, IT/ITeS, education and government: live across India, the UAE, Ghana and the US.
